Description

Author: Terence McCarthy

Format: Paperback

Published: 2009

This title sets out to answer commonly asked questions from nature and the environment. Why is there such a neat fit between the coastlines of Africa and South America? Why is Table Mountain flat, while the adjacent Twelve Apostles are so rugged? How are fossils formed? What happens to cause a tsunami? How does rock come to be folded?

For each of some 70 questions there is an explanation, be it geological, mineralogical, astronomic – whatever the field, the evidence is carefully presented and explained so that even those with little knowledge in these fields can understand the processes that have been at work.

PLEASE NOTE: THIS ITEM WILL NOT BE DELIVERED AND CAN BE PICKED UP FROM THE KITCHING FOSSIL AND EXPLORATION CENTRE IN NIEU BETHESDA.
